MySQL AND Oracle

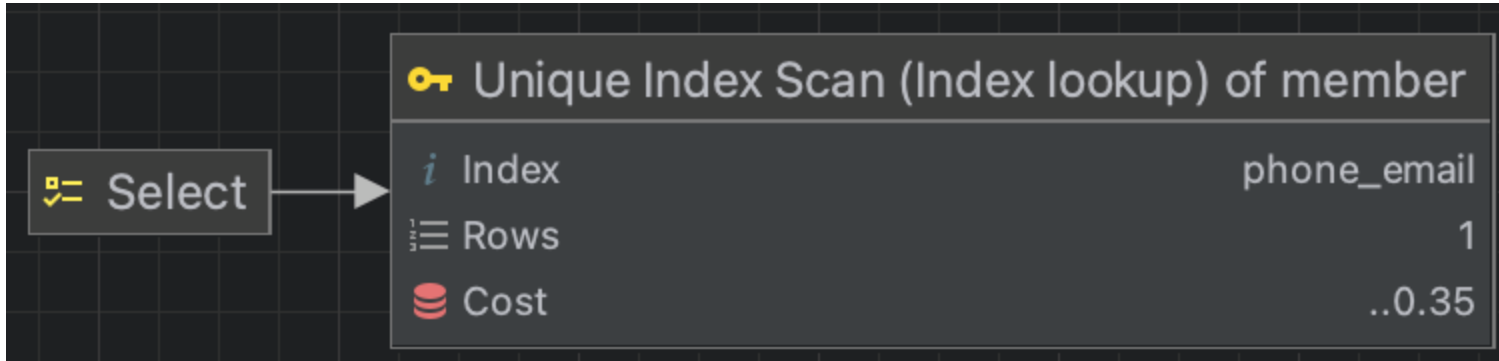

A screenshot of a SQL query result. The query is `select (count(member_id))`. The result is a single row with the value 573922.

(count(member_id))	
1	573922

전체 데이터의 수 50만개 이상

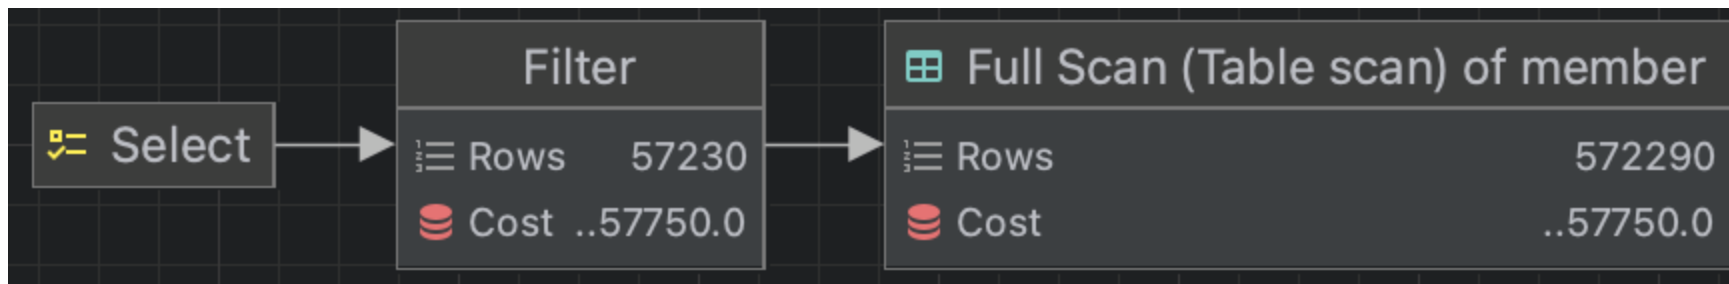

사진은 MySQL만 했는데 결과는 동일하게 나왔습니다.

WHERE A AND B

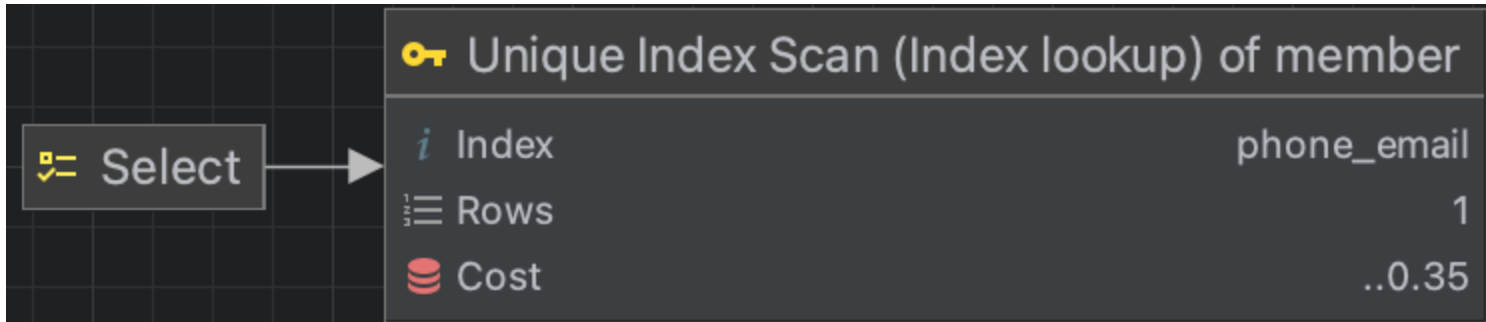

인덱스 사용

WHERE A OR B

인덱스 미사용

WHERE A

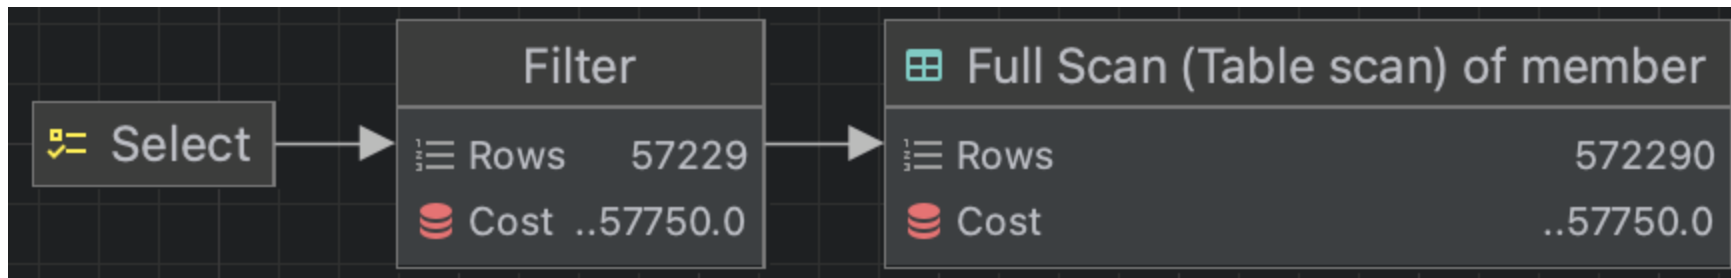

The diagram shows a 'Select' operation (represented by a yellow icon) connected by an arrow to a 'Unique Index Scan (Index lookup) of member' operation (represented by a yellow key icon). The 'Unique Index Scan' operation is further detailed with a table showing its properties.

Unique Index Scan (Index lookup) of member		
<i>i</i> Index	phone_email	
Rows		1
Cost		..0.35
